ABSTRACTED-PUB-NO: EP 1154645A

BASIC-ABSTRACT:

NOVELTY - The teletext programme display

has each page broadcast as digital packets. The packets are received (12) with labels referring to other pages, and the first and second associated packet set decoded (14) to produce a label and the associated page number. The labels and corresponding page number are then held in a memory (16).

USE - Television screen teletext display.

ADVANTAGE - Allows the user to easily and rapidly access a chosen teletext page without the need to access unwanted intermediate pages.

DESCRIPTION OF DRAWING(S) - The figure shows a logic diagram of the steps towards producing the label and associated page number

digital packets received 12

decoder 14

associated information stored 16
